Summary

Software Developer with over 2 years of experience in building real-time Web3 analytics, scalable data pipelines, agentic AI workflows and graph-based intelligence systems. Proven track record at Owlbyte in engineering high-performance tools—from automated Neo4j relationship mapping to live sentiment dashboards—leveraging React, Node.js, Python, and AWS to drive data-driven decision-making

Education

B.Tech. – Indian Institute of Technology Kanpur

Major in Materials Science and Engineering, Minor in ML and Applications

Nov 2020 – April 2024

GPA: 7.2 / 10.0

Skills

Languages & Core Frameworks: Javascript, Python, HTML/CSS, C, C++, SQL, React, Node.js, Express.js, and Next.js

Data, Cloud & Databases : Neo4j, MongoDB, MySQL, AWS (Lambda, Timestream, RDS, Redshift, EC2), Airflow, and WebSockets

DevOps & Specialized Tools : CI/CD, Data Structures & Algorithms (DSA), Lightweight Charts, OpenAI codex, Claude, Gemini

Experience

Owlbyte, Software Developer

May 2024 - Present

Dopamyn WebApp | *AI-Assisted Product Development*

- Developed enhanced core product features (onboarding flows, table and data modules) for production-focused web application
- Leveraged **OpenAI Codex and Claude** to accelerate implementation, debugging and code refinement while maintaining quality

AskRoger WebApp | *Real-time analytics dashboard for social intelligence*

- Implemented a live data dashboard using **WebSockets and Centrifuge** to provide updates for thousands of **cashtag metrics**
- Created **tier-based access** system preventing unauthorized feature access through frontend gating and secure API integration
- Created a **custom charting plugin** and **embeddable widgets** to correlate social media activity with market price movements
- Integrated a **cryptocurrency payment gateway** to handle subscription purchases with automated transaction confirmations

Graph Intelligence Engine | *Social Influence and Narrative Mapping Platform*

- Built an automated **Neo4j** system mapping Twitter and crypto-asset connections, synchronized daily via scheduled **Cron jobs**
- Developed **MySQL-Neo4j data pipeline** and REST API using **AWS Lambda and API Gateway** for real-time relationship analysis

X-Alpha Chrome Extension | *Social Feed Overlay for Real-time Trading*

- Engineered a **browser-integrated tool** using **React** that injects real-time price charts and sentiment metrics into social feeds
- Implemented data visualization with **Lightweight Charts & D3** correlating token price movements with social media mentions

Owlbyte, Backend Engineer & Data Analyst (*Offered PPO*)

May 2023 - April 2024

- Developed system to profile Ethereum wallets via network analysis to characterize clusters, identify profitable trading behavior
- Engineered a data pipeline using **AWS Timestream, RDS, Redshift, Lambda** orchestrated by **Airflow**; enabling real time alerts
- Built dashboard correlating transaction patterns with market movements to simplify crypto trends & improve risk assessments

Techavtar, Associate Product Manager

May 2022 - July 2022

- Digitized offline bidding processes into online platform, **increasing tender counts by 50%** while **maintaining revenue streams**
- Optimized operational efficiency through digital transformation, resulting in **30% revenue hike** and manual workload reduction

Projects

YouTube Ad Intelligence Engine | End-to-End AI Web Extension

- Developed a **React** extension via **WXT framework** to display & trigger AI-driven analysis of YouTube ads using **extracted Video IDs**
- Orchestrated **agentic workflow** using local **n8n Docker image** and AI Agents to analyze transcripts for transparency & intelligence
- Optimized performance by using **Supabase storage** to cache AI analysis, delivering instant results for previously processed videos

Sentimental Analysis | Course Project

- Developed **LSTM & BiLSTM** neural networks to capture sentiment in text data while handling preprocessing and tokenization
- Enhanced model accuracy by [5%] via extensive **cross-validation, hyperparameter tuning** and utilizing the **Adam optimizer**
- Pioneered **BiLSTM layers** and **dynamic dropout** resulting in **0.68 F1 score** across **92,228** diverse & complex textual contexts
